```
void func(int n, string s) { // size of s = m
    for (int i = 0; i < n; i++) {
        for (int j = i + 1; j < n; j++) {
            cout << s << endl; // printing a string
        }
    }
}
```

No. of iterations = $O(n^2)$

work done in each iter = $O(m)$

$$TC = O(n^2 m).$$

[abd, dfg, bce, ddb]. $n = 4$. $m = 3$.

1) [abd, dfg, abc, bdd].
2) [abc, abd, bdd, dfg].

abc < abd.

1) $nm \log m$ / $nm \log n$
2) nm / nm^2 / $mn \log n$

1). Sorting a single string → $O(m \log m)$.
Sorting n strings → $O(nm \log m)$

2). Sorting a list of ints → $O(n \log n)$
Comparing 2 ints → $O(1)$
No. of comparisons → $x := O(n \log n)$.

$x * 1 = n \log n$.

Comparing 2 strings → $O(m)$
Sort a list of strings → $O(nm \log n)$.

Overall $TC = O(nm \log m + nm \log n)$

$= O(nm(\log(m) + \log(n)))$.

ints		strings
1	→	m
n log n	→	nm log n
